SUMMARY

IT student with a foundation in software development, UI/UX design, hardware troubleshooting, and network configuration. Skilled in developing practical technology solutions, with a focus on usability, functionality, and efficiency.

EXPERIENCE

IT Technician Assistant
May 2023 – May 2023

Razorclaw Technologies and Solutions, Legazpi City, Philippines

- Resolved computer and laptop hardware and software issues by assisting with troubleshooting, Windows installation, and system unit assembly, supporting the restoration and setup of client devices.
- Documented and communicated customer-reported technical issues to the IT team, helping facilitate accurate issue evaluation and ticket creation.
- Participated in onsite client visits and technical assessments with IT technicians, assisting in identifying and evaluating reported hardware and system issues.

PROJECTS

RENT-KEL: Vehicle Rental and Booking Platform
January 2026 - Present

Front End, UX/UX | Figma, FigmaJam, Canva, React, Tailwind, Next.js

- Designed the user interface, user flows, wireframes, prototypes, and system screens for a car rental management platform, providing customers and personnel with a centralized and accessible digital experience.
- Contributed to frontend development using React, Tailwind CSS, and Next.js, while supporting backend implementation, helping deliver features for vehicle management, online booking, maintenance, GPS tracking, employee management, payment management, notifications, and analytics.
- Digitized previously manual and spreadsheet-based rental operations by enabling real-time fleet visibility, anytime booking, and centralized business management, reducing reliance on logbooks, manual inquiries, and manual fleet information sharing.

CastDeck
January 2026 – May 2026

Solo Developer | HTML, CSS, JavaScript, PHP, OBS, Scrcpy

- Built CastDeck, a browser-based broadcast system that gives local esports tournaments pro-style graphics: an operator panel and OBS browser sources for the draft, in-game HUD, standby scenes, results, brackets, and champions.
- Developed a pick/ban draft engine and kept every screen in sync through BroadcastChannel and ETag-cached PHP polling, with locked JSON writes, upload checks, and same-origin request guards
- Wrote a HUD reader that recognizes K/D/A and gold from the game feed via OBS WebSocket or ADB, and a Node.js and Puppeteer studio that renders transparent stinger transitions.

Hospital Network System
November 2025

Network Designer | Cisco Packet Tracer

- Designed and configured a four-floor hospital network using routers, switches, wireless devices, and end devices, with VLAN segmentation for each department, establishing an organized and scalable network infrastructure.
- Implemented VLSM, DHCP, inter-VLAN routing, and dynamic routing protocols, enabling automated IP address assignment and successful communication between network segments and departments.
- Applied network security configurations and performed connectivity testing and troubleshooting, verifying secure, segmented, and functional communication throughout the simulated hospital network.

EDUCATION

Bicol University
August 2023 - Present

BS in Information Technology
Legazpi City, Albay

SKILLS AND INTERESTS

Languages: C | Python | JavaScript | SQL

Framework & Libraries: React | Next.js

Cloud & DevOps: Github | Vercel

Tools: VS Code | Git | MySQL | Google Antigravity | Vercel | Supabase
